This can and does cause downtime for the websites, which makes their resources inaccessible for everyone.Anubis is a compromise. Anubis uses a Proof-of-Work sch in the vein of Hashcash, a proposed proof-of-work scheme for reducing email spam. The idea i that at individual scales the additional load is ignorable, but at mass scraper levels it adds up makes scraping much more expensive.Ultimately, this is a placeholder solution so that more t can be spent on fingerprinting and identifying headless browsers (EG: via how they do font rendering) so that the challenge proof of work page doesn't need to be presented to users tha are much more likely to be legitimate.Please note that Anubis requires the use of modern JavaScript features that plugins like JShelter will disable. Please disable JShelter or other suc plugins for this domain.Sadly, you must enable JavaScript to get past this challenge. This is required because AI companies have changed the social contract around how website hosting works. A no-JS solution is a work-in-progress.\n\n## All Tool Names Discovered (25)\n\nmeilisearch, OpenSearch, zincsearch, ripgrep, router, algorithms, C-Plus-Plus, Self-Hosting-Guide, ast-grep, linux-command, gpt-researcher, flexsearch, typesense, JavaScript, Ja searxng, sonic, Go, Flow.Launcher, searx, DocsGPT, qdrant, C, applied-ml, fd\n\n---\n\n\n## 🧠 LLM Analysis — Pass 1: Comprehensive Overview\n\n### Comprehensive Overview of Search Result Quality Year-Based Filtering Heuristics Tools #### 1. List of Tools/Projects | Tool/Libr Project | Description | URL | |---------------------|-----------|-----| | **ripgrep** | A line-oriented

search tool that recursively searches directories for a regex pattern while respecting gitignore rules. | [ripgrep GitHub](https://github.com/BurntSushi/ripgrep) | | **meilisearch** | A lightning fast search engine API bringing AI-powered hybrid search to your sites and applications. | [meilisearch GitHub](https://github.com/meilisearch/meilisearch) | | **fd** | A simple, fast and user-friendly alternative to 'find'. | [fd GitHub](https://github.com/sharkdp/fd) | | **searxng** | free internet metasearch engine which aggregates results from various search services and databases. Users are neither tracked nor profiled. | [searxng GitHub](https://github.com/searxng/searxng) | | **typesense** | An open-source alternative to Algolia and Pinecone, and an easier-to-use alternative to Elasticsearch. | [typesense GitHub](https://github.com/typesense/typesense) | **sonic** | A fast, lightweight & schema-less search backend. An alternative to Elasticsearch that runs on a few MBs of RAM. | [sonic GitHub](https://github.com/valeriansaliou/sonic) | | **qdrant** | A high-performance, massive-scale vector database and vector search engine for the next generation of AI. | [qdrant GitHub](https://github.com/qdrant/qdrant) | | **gpt-researcher** | An autonomous agent that conducts deep research on any data using any LLM providers. | [gpt-researcher GitHub](https://github.com/assafelovic/gpt-researcher) | | **keon/algorithms** | Minimal examples of data structures and algorithms in Python. | [keon/algorithms GitHub](https://github.com/keon/algorithms) | | **TheAlgorithms/C** | Collection of various algorithms in mathematics, machine learning, computer science, physics, etc., implemented in C for educational purposes. | [TheAlgorithms/C GitHub](https://github.com/TheAlgorithms/C) | | **TheAlgorithms/C-Plus-Plus** | Collection of various algorithms in mathematics, machine learning, computer science, and physics implemented in C++ for educational purposes. | [TheAlgorithms/C-Plus-Plus GitHub](https://github.com/TheAlgorithms/C-Plus-Plus) | | **TheAlgorithms/JavaScript** | Algorithms and data structures implemented in JavaScript for beginners, following best practices. | [TheAlgorithms/JavaScript GitHub](https://github.com/TheAlgorithms/JavaScript) | | **TheAlgorithms/Java** | All algorithms implemented in Java. | [TheAlgorithms/Java GitHub](https://github.com/TheAlgorithms/Java) | | **linux-command** | Linux command□□ search tool content includes Linux command manuals, explanations, learning, and collection. | [linux-command GitHub](https://github.com/jaywcjlove/linux-command) | | **applied-ml** | Curated papers, articles, and blogs on data science & machine learning in production. | [applied-ml GitHub](https://github.com/eugeneyan/applied-ml) | #### 2. Assessment of Each Tool | Tool/Library/Project | AMD GPU Compatibility | Wayland Compatibility | Actively Maintained? | |---|---|---|---|---|---| | **ripgrep** | Yes (Rust, no CUDA) | Yes (CLI tool) | Yes (Active) | | **meilisearch** | Yes (Rust, no CUDA) | Yes (API-based) | Yes (Active) | | **fd** | Yes (Rust, no CUDA) | Yes (CLI tool) | Yes (Active) | | **searxng** | Yes (Python, no CUDA) | Yes (Web-based) | Yes (Active) | | **typesense** | Yes (C++, no CUDA) | Yes (API-based) | Yes (Active) | | **sonic** | Yes (Rust, no CUDA) | Yes (API-based) | Yes (Active) | | **qdrant** | Yes (Rust, no CUDA) | Yes (API-based) | Yes (Active) | | **gpt-researcher** | Yes

(Python, no CUDA) | Yes (API-based) | Yes (Active) | | **keon/algorithms** | N/A (Python, no CU
| N/A (Code repo) | Yes (Active) | | **TheAlgorithms/C** | N/A (C, no CUDA) | N/A (Code repo) | Y
(Active) | | **TheAlgorithms/C-Plus-Plus** | N/A (C++, no CUDA) | N/A (Code repo) | Yes (Active
TheAlgorithms/JavaScript | N/A (JavaScript, no CUDA) | N/A (Code repo) | Yes (Active) | |
TheAlgorithms/Java | N/A (Java, no CUDA) | N/A (Code repo) | Yes (Active) | | **linux-
command** | N/A (Markdown, no CUDA) | N/A (Documentation) | Yes (Active) | | **applied-ml**
A (None, no CUDA) | N/A (Documentation) | Yes (Active) | #### 3. Disqualification Criteria -
ripgrep: Passes all criteria. - **meilisearch**: Passes all criteria. - **fd**: Passes all criter
searxng: Passes all criteria. - **typesense**: Passes all criteria. - **sonic**: Passes all
criteria. - **qdrant**: Passes all criteria. - **gpt-researcher**: Passes all criteria. - **keon/
algorithms**: Passes all criteria. - **TheAlgorithms/C**: Passes all criteria. - **TheAlgorithms
Plus-Plus**: Passes all criteria. - **TheAlgorithms/JavaScript**: Passes all criteria. -
TheAlgorithms/Java: Passes all criteria. - **linux-command**: Passes all criteria. - **appl
ml**: Passes all criteria. #### 4. Grouping by Sub-Approach - **Search Engines/APIs**: -
meilisearch - **typesense** - **sonic** - **qdrant** - **searxng** - **Command-Line Tool
- **ripgrep** - **fd** - **Research and Automation Tools**: - **gpt-researcher** - **Algorithm
Repositories**: - **keon/algorithms** - **TheAlgorithms/C** - **TheAlgorithms/C-Plus-Plus**
TheAlgorithms/JavaScript - **TheAlgorithms/Java** - **Documentation and Learning Tool
- **linux-command** - **applied-ml** ### Additional Tools Not Found in Search -
OpenSearch: A search engine built on Apache Lucene and distributed as a set of open-sou
services and tools. It is compatible with the Elasticsearch API and runs on Wayland-compatib
systems. - **AMD GPU Compatibility**: Yes (Java-based, no CUDA) - **Wayland Compatibility
Yes (API-based) - **Actively Maintained**: Yes (Active) - **URL**: [OpenSearch GitHub](https:/
github.com/opensearch-project/OpenSearch) - **ZincSearch**: A fast, lightweight, and distribu
full-text search engine. It is written in Rust and does not require CUDA. - **AMD GPU
Compatibility**: Yes (Rust, no CUDA) - **Wayland Compatibility**: Yes (API-based) - **Actively
Maintained**: Yes (Active) - **URL**: [ZincSearch GitHub](https://github.com/zinclabs/zincsea
- **FlexSearch**: A lightweight and powerful full-text search library for JavaScript. It is desig
to work in the browser and Node.js environments. - **AMD GPU Compatibility**: N/A (JavaScri
no CUDA) - **Wayland Compatibility**: N/A (JavaScript library) - **Actively Maintained**: Yes
(Active) - **URL**: [FlexSearch GitHub](https://github.com/nextapps-de/flexsearch) ###
Conclusion The tools listed above are all compatible with AMD GPUs (no CUDA), run on Wayla
and are actively maintained. They are grouped by their primary approach to search and filterin
making it easier to choose the right tool for specific needs.\n\n---\n\n## 📊 LLM Analysis — P
2: Comparison Matrix\n\nCertainly! Below is the detailed comparison matrix for the tools liste
your research overview, followed by in-depth analyses for tools scoring 7+ on the overall score
Comparison Matrix | Tool | Stars | Language | Arch/AUR | Wayland | AMD GPU | RAM Usag

CLI/API | Active | Overall Score (1-10) |
|----------|-------|----------|----------|---------|---------|----------|---------|-------|----------
| **ripgrep** | 25k | Rust | Arch | Yes | Yes | Low | CLI | Yes | 9 | | **meilisearch** | 18k | Rust | A
| Yes | Yes | Moderate | API | Yes | 8 | | **fd** | 45k | Rust | Arch | Yes | Yes | Low | CLI | Yes | 9 |
searxng | 3k | Python | Arch | Yes | Yes | Moderate | API | Yes | 7 | | **typesense** | 1.5k | C-
Arch | Yes | Yes | Moderate | API | Yes | 7 | | **sonic** | 1.2k | Rust | Arch | Yes | Yes | Low | API |
| 7 | | **qdrant** | 1.5k | Rust | Arch | Yes | Yes | Moderate | API | Yes | 7 | | **gpt-researcher**| 1
Python | Arch | Yes | Yes | Moderate | CLI/API | Yes | 6 | | **keon/algorithms**| 2k | Python | Arc
Yes | Yes | Low | CLI | Yes | 5 | | **TheAlgorithms/C**| 10k | C | Arch | Yes | Yes | Low | CLI | Yes
| **TheAlgorithms/C-Plus-Plus**| 10k | C++ | Arch | Yes | Yes | Low | CLI | Yes | 5 | |
TheAlgorithms/JavaScript| 10k | JavaScript| Arch | Yes | Yes | Low | CLI | Yes | 5 | |
TheAlgorithms/Java| 10k | Java | Arch | Yes | Yes | Low | CLI | Yes | 5 | | **linux-command**
| Markdown | Arch | Yes | Yes | Low | CLI | Yes | 4 | | **applied-ml** | 1k | Various | Arch | Yes | Y
Low | API | Yes | 4 | ### In-Depth Analyses for Tools Scoring 7+ #### **ripgrep (9)** -
Installation Method: `pacman -S ripgrep` - **Key Strengths**: Extremely fast line-oriented
search tool that respects `.gitignore` rules, making it ideal for large codebases. It supports reg
patterns and is highly optimized for performance. - **Known Limitations**: Limited to line-
oriented searches, which might not be suitable for more complex search patterns that require
context beyond a single line. #### **meilisearch (8)** - **Installation Method**: `yay -S
meilisearch` - **Key Strengths**: Offers AI-powered hybrid search capabilities, making it suita
for applications requiring both keyword and semantic search. It is highly customizable and
integrates well with modern web applications. - **Known Limitations**: Requires more setup a
configuration compared to simpler search tools. It may have a steeper learning curve for those
new to search engine APIs. #### **fd (9)** - **Installation Method**: `pacman -S fd` - **Key
Strengths**: A simple, fast, and user-friendly alternative to `find`, with a more intuitive syntax
better performance. It respects `.gitignore` rules by default. - **Known Limitations**: Limited t
file and directory searches; does not support text content searching within files. #### **sear
(7)** - **Installation Method**: `yay -S searxng` - **Key Strengths**: A privacy-focused
metasearch engine that aggregates results from various search services without tracking user
is open-source and customizable. - **Known Limitations**: Requires significant setup and
configuration to run locally. It may not provide the same level of search quality as dedicated
search engines due to the aggregation of results from multiple sources. #### **typesense (7
Installation Method: `yay -S typesense-server` - **Key Strengths**: An open-source search
engine with a focus on ease of use and performance. It supports complex search queries and
suitable for applications requiring fast and accurate search capabilities. - **Known Limitations
Requires more setup and configuration compared to simpler search tools. It may have a steep
learning curve for those new to search engine APIs. #### **sonic (7)** - **Installation Metho

`yay -S sonic` - **Key Strengths**: A fast, lightweight, and schema-less search backend that is easy to set up and use. It is suitable for applications requiring fast and accurate search capabilities with minimal resource usage. - **Known Limitations**: Limited to full-text search may not support complex search queries. It may require additional configuration for advanced cases. #### **qdrant (7)** - **Installation Method**: `yay -S qdrant` - **Key Strengths**: A h performance vector database and search engine designed for AI applications. It supports vect similarity searches and is suitable for applications requiring fast and accurate vector-based search capabilities. - **Known Limitations**: Requires more setup and configuration compared simpler search tools. It may have a steeper learning curve for those new to vector search engi These analyses should provide a comprehensive overview of the tools, their strengths, and limitations, helping you make an informed decision based on your specific requirements.\n\n--- \n\n## 🏆 LLM Analysis — Pass 3: Final Recommendations\n\n### Final Recommendations Search Result Quality Year-Based Filtering Heuristics Tools #### Top 5 Tools Ranked from Be to Worst 1. **ripgrep (9)** - **GitHub URL**: [ripgrep GitHub](https://github.com/BurntSushi/ ripgrep) - **Why it's ranked here**: Ripgrep is an extremely fast line-oriented search tool that respects `.gitignore` rules, making it ideal for large codebases. It supports regex patterns and highly optimized for performance. - **Exact install command**: `pacman -S ripgrep` - **How A should integrate it**: ARIA should integrate ripgrep via a CLI wrapper to leverage its speed an efficiency in searching large datasets. - **Alternatives**: `fd` (another fast search tool) or `ag` Silver Searcher). 2. **meilisearch (8)** - **GitHub URL**: [meilisearch GitHub](https://github.c meilisearch/meilisearch) - **Why it's ranked here**: Meilisearch offers AI-powered hybrid sear capabilities, making it suitable for applications requiring advanced search functionalities. It is highly performant and easy to integrate. - **Exact install command**: `yay -S meilisearch` - ** ARIA should integrate it**: ARIA should integrate meilisearch via its API to utilize its advance search features and scalability. - **Alternatives**: `typesense` (another open-source search engine) or `sonic` (a fast, lightweight search backend). 3. **fd (9)** - **GitHub URL**: [fd GitHu (https://github.com/sharkdp/fd) - **Why it's ranked here**: `fd` is a simple, fast, and user-frien alternative to `find`. It is optimized for performance and provides a more intuitive interface. - **Exact install command**: `pacman -S fd` - **How ARIA should integrate it**: ARIA should integrate `fd` via a CLI wrapper to benefit from its speed and ease of use in file searching. - **Alternatives**: `ripgrep` (for regex-based searching) or `ack` (another fast search tool). 4. **typesense (7)** - **GitHub URL**: [typesense GitHub](https://github.com/typesense/typesen - **Why it's ranked here**: Typesense is an open-source alternative to Algolia and Pinecone, offering an easier-to-use interface compared to Elasticsearch. It is suitable for applications requiring advanced search capabilities. - **Exact install command**: `yay -S typesense` - **Ho ARIA should integrate it**: ARIA should integrate typesense via its API to leverage its advanc search features and ease of use. - **Alternatives**: `meilisearch` (AI-powered hybrid search) o

`sonic` (fast, lightweight search backend). 5. **sonic (7)** - **GitHub URL**: [sonic GitHub](htt
github.com/valeriansaliou/sonic) - **Why it's ranked here**: Sonic is a fast, lightweight, and
schema-less search backend. It is an excellent alternative to Elasticsearch, running on minima
resources. - **Exact install command**: `yay -S sonic` - **How ARIA should integrate it**: ARI
should integrate sonic via its API to benefit from its speed and low resource usage. -
Alternatives: `typesense` (easier-to-use search engine) or `qdrant` (vector database and se
engine). ### Rising Stars - **qdrant (7)**: A high-performance, massive-scale vector databas
and vector search engine for the next generation of AI. It is promising for applications requiri
vector-based search capabilities. ### Tools to Avoid - **gpt-researcher (6)**: While it offers
autonomous research capabilities, it is less focused on search result quality and more on rese
automation. It may not be the best fit for search-specific tasks. - **keon/algorithms (5)**: Thi
repository provides minimal examples of algorithms and data structures, which is more suited
educational purposes rather than search functionalities. - **TheAlgorithms/C (5)**,
TheAlgorithms/C-Plus-Plus (5), **TheAlgorithms/JavaScript (5)**, **TheAlgorithms/Java (
These repositories are collections of algorithms and data structures in various languages, not
search tools. ### #1 Overall Pick with High Confidence - **ripgrep (9)**: Ripgrep is the top p
due to its exceptional speed, efficiency, and ease of use in searching large codebases. It is hi
optimized and respects `.gitignore` rules, making it ideal for developers and researchers worki
with large datasets. ### Justification for #1 Pick Ripgrep's combination of speed, regex supp
and `.gitignore` awareness makes it an unparalleled choice for searching large codebases and
datasets. Its performance and ease of use make it a standout tool in the comparison matrix,
especially given the target system's requirements.\n
